

My name is Ousman Camara and I am a final year student at Eastern Mediterranean University. I am currently pursuing a four-year Bachelor of Science in Information Technology, and I plan to follow up with a master's degree after I graduate. I am seeking entry into your graduate program of computer science with the goal of pursuing an accelerated degree in computing and gaining industry-specific knowledge.

However, as an undergraduate student at Eastern Mediterranean University, my study program focuses on system design and programming. My background in computer architecture, networking, data structure, computer human interaction, and programming will prepared me for graduate studies in the field computer science because I have developed an ability for abstract thinking and problem solving. While studying, I had the opportunity to explore my interest in computer science further by exposing myself to the latest technological tools available in the area of programming, cloud computing, databases, cyber security and machine learning. This experience allowed me to excel in these areas while also learning more about myself.

My reason for wanting to study with you next fall is because your graduate program in computer science fits my current needs. I have strong foundation in almost all the modules offered by the computer science department and studying this courses will give me a deeper understanding and enhance my knowledge in computing enormously.

My resume highlights my education and experience. I am particularly proud of my previous work experience at Caretta Robotics Ltd. As an intern, I was able to increase the company's productivity by 10%.

Thank you for your time and consideration. I would be happy to speak with you further regarding my qualifications and interests.
